# EMERGYS E-INVOICING AUTOMATION

## Plug In for any ERP

---

### Background

A lot has changed since the time when companies received 100% of their vendor invoices on paper via the post office, with the introduction of e-invoicing, companies have reduced the cost related to the Invoice Processes dramatically and Automating invoice processing has shown to be the next step in evolution, being one of the fastest growing trends in the business arena. Automation eliminates the need to use paper, substantially reducing processing time and costs, factors that many businesses are keen to achieve in today's struggling economy.

### KEY FEATURES

#### Automated Posting

- Reduce time lag associated with posting bills
- Eliminate errors related to rekeying information
- Gain full transparency of where the invoice is in the transmission process

#### Transaction checks

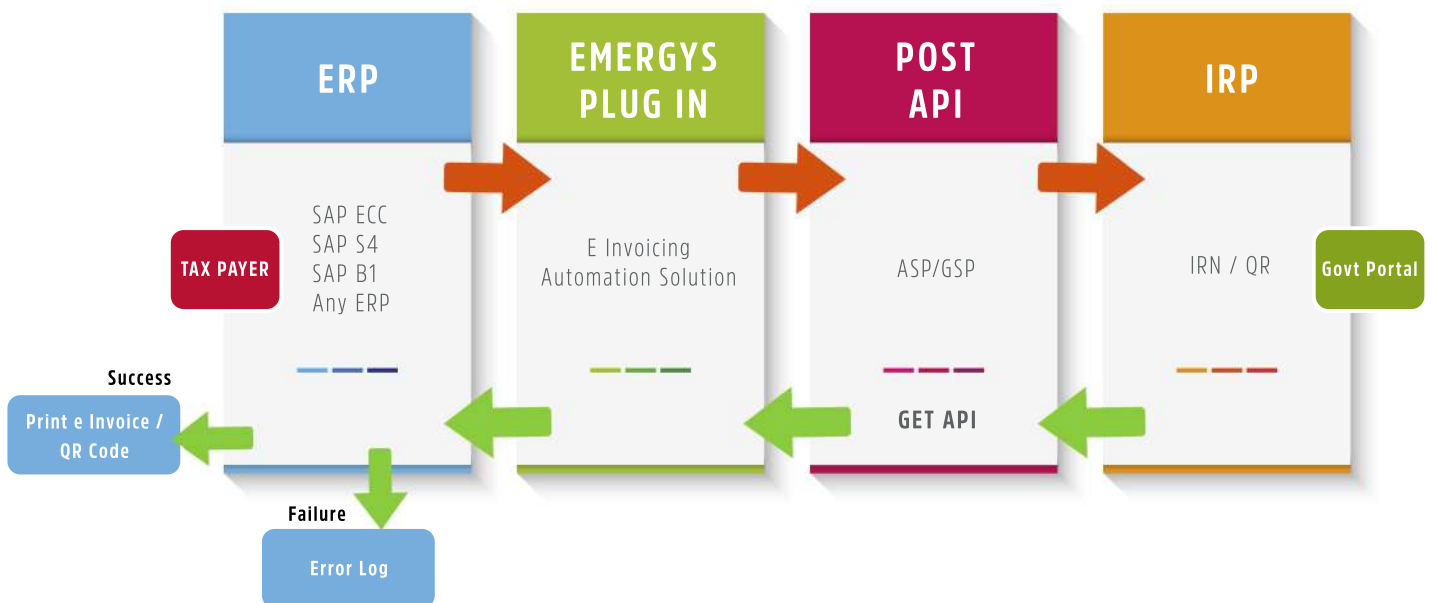

- Run Logical and business checks for every transaction to determine legal requirements for format authenticity and integrity
- Invoice Management application offers compliance with the highest available standards

# BUSINESS BENEFITS

- Reduces Cost of Invoice Processes By Increasing the level of automation
- Higher compliance and legal certainty by applying country- specific rules
- Improved connections to key business partners by accelerating exchange of accurate, trusted information
