

Simplified Inventory Counting Solution

For Sap
Business One

EMERGYS

AN INTELLIGENT ENTERPRISE EXPERIENCE

Overview

Overview

Cycle count is all about counting a small inventory amount within the warehouse daily. It is done to count the complete inventory of the warehouse through a significant duration of time. All the errors that take place at the time of small increments would contribute towards the adjustment of inventory accounting records at the end of the day. At the end of the day, the result obtained from the cycle would be a detailed procedure, which gives life to high levels of accuracy in inventory records and low rates in transaction errors.

Benefits of Cycle Counting

- Accuracy and Pilferage Reduction
- Productivity and Improved Expediting
- Less Safety Stock
- For income tax reporting
- To minimize loss and theft.
- To get rid of obsolete and out of date inventory items
- To evaluate movement of specific items

Advantages of using barcodes scanning Over traditional Paper Method

TIME SAVING

- Inventory counting is usually the most tedious process of a commercial company's warehouse operations.
- Barcoding, along with an inventory management system, allows for precise tracking of inventory levels in real time.
- In Inventory Counting, Bar coding can able to reduce man-hours spent and therefore increase productivity.

ERROR REDUCTION

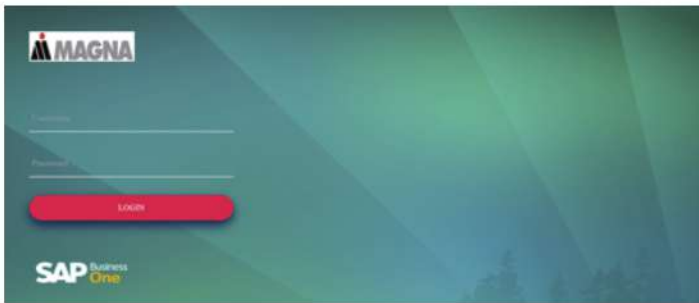

- Human errors caused by manual data entry can lead to extra expenses.
- The extra time spent on reconciling the inventory problems can be avoided with barcode confirmation.
- Using barcodes and barcode scanners for inventory counting can eliminate manual entries and improve accuracy

Emergys Solution

On Inventory counting with bar code Scanning

- Proven solution
- Compatible with any SAP B1 Version for SQL and HANA
- Admin user for creating new logins, Providing authorization to users etc.
- Easy Installation
- Self Explanatory Process Flow
- Advance GUI
- Undergone various validations and testing process
